Course Summary

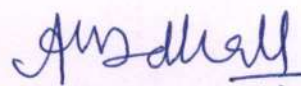

This course enables students to gain knowledge about basics of research and types of research. Students are enlightened about how to choose research topic, plan and prepare research design. The course also focuses to make students understand the importance of stating hypothesis.

The students are also given an overview about preparation of research proposal for research grants and they are explained about various research fellowships available. The course was designed along with some activities for students for experiential learning.

At the end of the course student will be able to design basic research proposal for grants and also writing skills required for accurate research report.

Course Summary

The course narrates theory and practice of mushroom cultivation. Lectures are focussed on different types of mushrooms and their economic importance. The nutritive values and medicinal properties of various mushrooms were deliberated. They were also enlightened with the economic importance of the cultivating mushroom and mushroom products. Hands on practicing session starting from spawn production, preparation of media, and preparation of substrate for cultivation was performed. Design and development of low-cost mushroom cultivation set up was taught. Participants were assigned to prepare media, substrate in polythene bags and made them to grow mushrooms. A technical session on scope and implementation of small-scale mushroom cultivation area was conducted. Participants are also given with addresses for procuring spawn and provided with information about entrepreneurship opportunities.

Course summary

The sole objective of imparting aptitude training is to make students learn to critically evaluate various real-life situations by resorting to an analysis of key issues and factors. This Aptitude training helped them to demonstrate various principles involved in solving mathematical problems and thereby reducing the time taken for performing job functions. Aptitude skills helps students in developing quantitative literacy skills that will be meaningful for their professional career. In this course, emphasis was placed on the need for data to understand data and make good decisions. Students were able to reason, model, and draw conclusions or make decisions with mathematical, statistical, and quantitative information. This also enabled students to critique and evaluate quantitative arguments that utilize mathematical, statistical, and quantitative information, draw conclusions and/or make decisions based on analysis and critique of quantitative information using proportional reasoning.

Course summary

In today's world, good decision making relies on data and data analysis. This course helped students develop the understanding that they will need to make informed decisions using data and to communicate the results effectively. The course was an introduction to the essential concepts, tools and methods of statistics for students in business, though these tools are also useful in many other real-world settings. The focus was on concepts, reasoning, interpretation, and thinking. Students were able to communicate and visualize their ideas, analyses, and results clearly and effectively. Students also developed brief understanding of the limitations and misuse of statistical inference as well as the ethics of data analysis and statistics. Any type of information may be subjected to data analytics to get insight to improve things. Data analytics revealed trends which can be used to optimise processes and increase efficiency of a business or system. Practical training sessions using excel was also part of the program.

Course Summary

A wine production module typically aims to teach students, understanding of the process of wine making, including grape growing, harvesting, fermenting, aging, and bottling. The technical experts of the programme decrypted elaborately on different types of wine, their health benefits, and other applications of wine. The participants ardently learnt the techniques of preparing microbial inoculum, fermentation techniques, handling of equipment, sensory evaluation of wine and estimation of alcohol content. Students gained knowledge about different types of grapes and wine regions, and how they influence the flavor and style of wine. They understand the scientific principles involved in wine production, such as the role of yeast in fermentation, the impact of temperature on wine quality, and the use of additives and chemicals.

Course summary

The modules helped the students to understand the characteristics, composition, properties, and sources of solid waste generation. Students were able to differentiate the wastes generated from different sources. The students witnessed the types of wastes generated in the campus which made them clear about the topic.

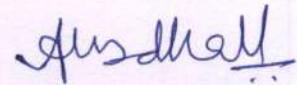

The solid waste disposal & management is a challenging task in the present scenario, in this purview, students were given insights about the management of different types of wastes generated, the methodologies adopted for the same.

The students were enlightened about the duties of waste generator and policies & acts existing in the country for waste disposal and management. The students were encouraged to do skits & role plays for creating awareness about the waste impact on environment and its disposal & management. The students also joined hands in campus cleaning.
